How to INSTALL a Door Handle!

NOTE: This is for a that opens TOWARDS you/inside.

1. When installing latch (C) have the pointy part be closest to the side where the indoor lock (B) is going to be.

How to INSTALL a Door Handle! ...Continued!

2. Once you have determined which way the latch (C) faces - screw in top and bottom screws (D).

3. Place outside handle (A) into holes in latch (C) from the OPPOSITE side of where you determined the inside lock (B) was going to go.

4. Now it is time to match up the indoor lock handle (B) to the outside handle(C).
Match up all holes again.

...Continued!

4. Screw in screws (E) to secure both handles and latch together.

NOTE: Line up the screw with the handles slightly separated so you can see if the screws are going into the correct spots.

Once you have one lined up screw it in about 5 times to make sure it is secure but still loose enough to see in between - then screw in the other one on the other side and then tighten all up.
